

Laptop Screen Broken services Tambaram

Posted by toshibaadmin - 15 Nov 2015 08:22

If your display problems aren't the result of visible physical damage, however, the problem

may not be the LCD. If your screen's backlight flickers, shuts down after a few minutes of

usage, or doesn't come on at all, but you can still see a faint screen image, your problem may

be the inverter, a small board that supplies power to the backlight. The good news is that

these boards are available for well under \$100. (We'll show you how to locate and replace the

inverter.) If replacing the inverter doesn't solve the problem, the backlight itself may be

faulty. If that's the case, replacing the LCD should fix your problem.
